RESOURCES ATTENDEES

Code of Conduct

Harassment and unprofessional conduct is not permitted. If you experience or witness it, please reach out.

RCW Code of Conduct contacts:

- Sandrine Thomas (sthomas@noirlab.edu)
- Federica Bianco (fbianco@udel.edu)
- Jeff Carlin (jeff.carlin@noirlab.edu)

full code of conduct

Rubin Observatory adheres to the principles of kindness, trust, respect, diversity of viewpoints, and inclusiveness in order to provide a learning environment that produces rigor and excellence.

Covid-19

Questions?
Feel unwell?

Email us for anything covid related. It's confidential.

rubin2026-covid@lists.lsst.org

Check name-tags for these contact comfort level stickers.

Wear a mask if you want to!

Lost & Found: use the **RCW registration desk**.
SLAC is not responsible for unattended items.

Social Batteries

If someone is wearing a pin like this, and it indicates a low social battery, please give them their space or offer to restart the conversation at a later time.

Reminders

<https://it.slac.stanford.edu/support/KB0010023>

Wifi:
LS.ST/AO7

Virtual participants should be muted when they're not speaking.

In-person participants should speak into the room microphone(s), or the chair should repeat all questions into the microphone, so that the virtual participants can hear what is said.

In the Rubin 2026 Slack Space, all participants can use the session's channel for Q&A and discussion.

The channel name convention is, e.g.:
#day1-mon-1030-intro-to-rubin

In Zoom, use Share Screen to display slides in the room.

In Zoom, use the chat to:

- request to unmute to ask a question, or
- type your question so someone can speak it aloud.

The Zoom “raise hand” feature is generally harder for moderators to track, and is not preferred, but may be used at the discretion of the session chair.

Rubin Observatory and the Decadal Survey

Top Ranking: Designated as the highest-priority large ground-based facility in the 2010 Decadal Survey.

Previous efforts

Workshop at Argonne in 2019: <https://arxiv.org/abs/1905.04669>.

- Presentations (<https://indico.fnal.gov/event/19959/other-view?view=standard>)

Astro2020 Decadal Survey white papers:

1. Next Generation LSST Science <https://arxiv.org/abs/1907.08945>
2. Future Uses of the LSST Facility: Input from the LSST Project Science Team <https://arxiv.org/abs/1907.10487>

7

Snowmass paper and report:

<https://arxiv.org/abs/2203.07220>

<https://arxiv.org/abs/2209.08654>

Goal of the workshop

- Over the three days, our community will write one shared document: a roadmap identifying science cases for the white papers we should develop for the next decadal review, covering the future of Rubin Observatory after the LSST.
- *Our intent is to build compelling, community-driven science cases that can guide post-LSST Rubin planning and position the community for future opportunities.*

Participants

What do you think is the single most compelling opportunity for post-LSST Rubin ?

Will you attend in person or remotely (hybrid)?

115 responses

● In person
● Remote / hybrid participant
● Not sure yet

Academic / career position

115 responses

● Undergraduate student
● Graduate student
● Postdoctoral researcher
● Research scientist / staff scientist
● Faculty
● Project / observatory scientist
● Data / software scientist
● Instrument / technical specialist

▲ 1/2 ▼

Themes

Participants join one of five thematic groups (A-E):

- A) Continued LSST-style surveying,
- B) Alternative cadences & footprints,
- C) Narrow- & medium-band surveys, other filters, filter offsets,
- D) Targets of opportunity & multi-messenger astronomy,
- E) Enabling technology & upgrades

Prompts: same for every group

- **1. Goal:** In 1–2 sentences, state the specific science question and the single result that would matter. Name *one* question, not a whole field.
- **2. Why Rubin, why now:** Say what *only* Rubin can do here (using its area $\times$ field-of-view $\times$ time ($A \cdot \Omega \cdot T$) that no other 2036-era facility matches) and why the decision cannot wait.
- **3. The skeptic's objection, and our answer:** Write the strongest reason a decadal panel would say *no*, then a short rebuttal framed as the *best available* investment, not merely a good idea.
- **4. What Rubin needs:** Name the concrete change (filter set / cadence / instrument / software) and a rough lead time (filters > 2–3 yr; focal-plane tech > 5 yr).
- **5. Priors:** Which early-LSST result (DR3 / DR6 / DR12...) must be in hand before this case is airtight?

Prompts: same for every group

- **6. Success metric / figure of merit** — How would we measure success? Give standard metrics *and* a broader "discovery-potential" metrics. Name 1–2 concrete numbers.
- **7. Connections:** Which other facilities, surveys, and workshop groups does this link to?
- **8. Next step ♦ owners** The single most useful thing to do *after* the workshop, and list of potential owners. This line becomes a row in the roadmap table.

For each idea, also add a line on these cross-cutting angles when they apply:

- **AI/ML angle** (if relevant): does AI/ML (including agentic AI) enable or change this case?
- **Chilean engagement and co-leadership** (if relevant), name a co-lead, data-access, or training/exchange tie-in.

Discussion

- Open Discussion
- Work in small groups, pick one of the 5 themes:
 - Use this slide deck to take notes
 - Questions:
 - What do you think is the single most compelling opportunity for post-LSST Rubin ?
 - Prompts above.
